

Saburjon Safarov

Android Developer | Kotlin | Architecture-Focused Engineer

Khujand, Tajikistan

safarovsaburjon2002@gmail.com

[GitHub](#) • [LinkedIn](#)

Professional Summary

Android Developer with 5+ years of commercial experience building scalable, production-grade applications in the banking sector.

Specialized in Clean Architecture, enforced modularization, and Gradle-based build engineering. Strong focus on long-term maintainability, strict architectural boundaries, and SDK-style reusable components.

Actively working with Jetpack Compose and exploring Kotlin Multiplatform (KMP) to design cross-platform domain layers. Interested in build optimization, convention plugins, and architectural enforcement at the compiler/build level.

Work Experience

Android Developer

[Eskhata Bank](#) — Khujand, Tajikistan

2021 – Present

Industry: Banking & Financial Services

Key Contributions:

- Developing and maintaining a production mobile banking application.
- Implementing secure payment and transfer modules.

- Designing multi-module architecture with enforced layer separation.
- Structuring Gradle build logic using Kotlin DSL.
- Working with convention plugins to centralize configuration.
- Improving dependency management and module isolation.
- Implementing Dependency Injection using Hilt.
- Using Kotlin Coroutines and Flow with structured concurrency principles.
- Participating in architectural reviews and internal technical discussions.
- Ensuring scalability and long-term maintainability of the codebase.

Tech Stack:

Kotlin, Jetpack Compose, XML UI, Coroutines, Flow, Room, Hilt, Navigation Component, Gradle (Kotlin DSL), Multi-module architecture.

Technical Skills

Core Languages

- Kotlin (Advanced)
- Java

Android & UI

- Jetpack Compose (Compose-first mindset)
- XML-based UI
- ViewModel
- Flow / LiveData
- Navigation Component
- RecyclerView

Architecture & Engineering

- Clean Architecture
- MVVM
- Enforced modular architecture
- Repository pattern
- Structured concurrency
- Multi-module Gradle projects
- Gradle Kotlin DSL
- Custom Gradle convention plugins

Build & Tooling

- Gradle performance optimization

- Dependency version catalogs
- Modular dependency isolation
- Android Studio
- Git
- Linux (Ubuntu)
- macOS

R&D / Growth Areas

- Kotlin Multiplatform (KMP)
 - Kotlin Symbol Processing (KSP)
 - Advanced build logic design
 - SDK-style reusable architecture components
-

Selected Engineering Focus

- Enforcing architectural boundaries through module structure.
 - Designing scalable build systems for growing Android projects.
 - Reducing coupling between feature modules.
 - Preparing domain layers for future cross-platform reuse (KMP direction).
-

Education

[Polytechnic University](#)

Bachelor's Degree in Computer Science

Graduated with Honors (Red Diploma)

Alternative civil service completed (certificate obtained).

Additional Information

- English Level: A2 (actively improving for international roles)
- Open to remote opportunities
- 5+ years of programming experience
- Strong interest in scalable systems and long-term architecture
